RE: **VISION SCREENING**

At the recommendation of the American Academy of Pediatrics, our office is recommending a photo screening for children 6 months and older. It is a rapid and highly reliable technique for the early detection of sight-threatening conditions in children such as refractive errors (nearsightedness, farsightedness, astigmatism), amblyopia (lazy eye), strabismus (crossed eyes), and media opacities (cataracts).

In no way does this replace a complete and comprehensive eye examination by an ophthalmologist, nor can it be expected to detect all eye diseases or conditions that affect vision.

This service is not covered under your health care plan and will not be billed to your insurance company.

The vision screening is offered in addition to the physical examination at a cost of \$20.00 to be paid prior to the exam.

PLEASE CHOOSE ONE OPTION:

- Yes, I agree with the terms and agree to have the photo screening performed on my child.
- No, I have read the above and do not want the photo screening performed on my child.
